

STUDIO M SELECTION GUIDE

WELCOME TO YOUR STUDIO M SELECTION GUIDE

We have gathered together an extensive range of home choices for you to select and personalise your new home. Our professional Design Consultants will help guide you through your selections with their expert knowledge and advice.

LOOKBOOK THEMES

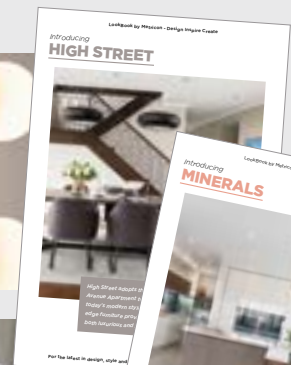

One of the most exciting things in building your new Metricon home is planning all the wonderful choices you will make. Our online Lookbook will give you lots of ideas on how to design and style your new home. For the latest in inspiration visit metricon.com.au/lookbook

QUALITY BRANDS

Metricon has partnered with Australia's most iconic brands to bring you a wonderful range of luxury inclusions to choose from at fantastic prices. We value our suppliers as business partners and are continually working together to bring the latest state-of-the-art brands to you. Below are just some of our partners that you will have the opportunity to select from in Studio M.

PerfectTimberFloors®

STANDARD INCLUSIONS & UPGRADE OPTIONS

All Metricon homes come with a variety of high-quality inclusions as standard from Australia's leading brands. Should you wish to upgrade selected items in your home, there is a wide range of upgrade options to choose from.

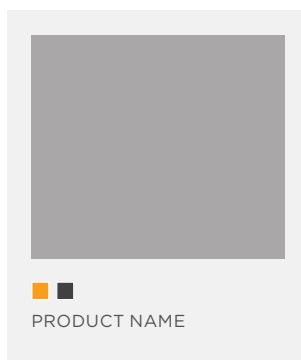

Please see key below to understand how **Standard Inclusions** and **Upgrade Options** are displayed.

Simply tick ☒ any options you wish to select throughout the guide and speak to your Interior Design Consultant.

Standard Inclusion (Included at no cost)

Throughout this guide, grey backgrounds indicate a Standard Inclusion.

- Freedom by Metricon
- Designer by Metricon

Upgrade Options (Selected at an additional cost)

White backgrounds indicate an Upgrade Option that can be selected for an additional cost. Your Interior Design Consultant will help clarify costs.

HEATING

GAS DUCTED HEATING

Gas ducted heating is an efficient way to heat your home during the colder months.

This type of heating comprises of a heating unit connected to a series of outlets via a system of ducts. The outlets & ducts are strategically placed throughout your home in the ceiling. The position of the heating unit depends on your house floor plan.

Metricon offers many different models and upgrades to heat your home efficiently.

Gas produces fewer greenhouse gas emissions, the efficiency of a ducted gas heating system doesn't drop in especially cold conditions, and it provides instant warmth to every household room at the touch of a button.

Zoning can also be added to your heating system so that you can choose which rooms to heat rather than the whole house.

COOLING

EVAPORATIVE COOLING

We offer several choices including budget friendly, ultra-low profile, ultra quiet & high-performance options.

These units come in a variety of sizes to suit your home size and developer requirements that may exist in your build area.

Braemar / Breezair pumps cooled, fresh air through your whole home

Just like a sea breeze keeps you cool at the beach on a hot day, Seeley International's evaporative air conditioning systems use the power of evaporation to cool your home.

On a hot day by the seaside, the movement of air over the ocean causes water to evaporate, absorbing some heat from the air. During this process, the air temperature is lowered and the result is a cooling sea breeze. This is the nature of evaporative cooling.

It is important to remember that cooled air inside the building is not recirculated, so a door or window must be left open for this air to escape, providing the whole building with a complete change in air at least every two minutes. Evaporative cooling is fresh air.

BREMAR BMQ

BRAEMAR LPQI
EVOLUTION

BREMAR SUPER STEALTH

BRAEMAR SUPERCOOL

Refer to <https://www.seeleyinternational.com/residential/star-ratings-explained/> for details on savings quoted. Some home designs are not able to have evaporative cooling installed due to limited roof space. Only LPQI and Extraordinaire range complies with low profile or contour evaporative cooling, if required by your developer.

HEATING & COOLING

SPLIT SYSTEM AIR CONDITIONERS

Split system installation:

Metricon offers both supply and installation of split system air conditioners, as well as power provision for future installation by clients after the hand-over of the home.

It is recommended to have the unit supplied and installed by Metricon during the build of your new home. This will ensure that all cables and refrigeration pipework is hidden within the wall cavities, there is no damage to your internal or external finishes, and the unit is installed on a concrete slab, keeping it secure.

We recommend ActronAir, Fujitsu or Braemar units for your new home.

The Braemar range has R32 refrigerant and phone connect as standard.

A selection of the Fujitsu range are also compatible with the Fujitsu General anywAiR® technology Wi-Fi adaptor. Using the free myanywAiR® app, the unit can be controlled from anywhere by smartphone or tablet.

The optional EasyConnect upgrade allows you to control your ActronAir Serene system wirelessly via your smart device. Cool your home down as you leave work or check you've turned off the air conditioning. It's all in the palm of your hand

Should you wish to install your own split system after handover we can provide isolating switches for the condenser to be connected to.

It is recommended to only use the provision option when the head unit is being installed onto an external wall, and preferably when the condenser will be installed in a back-to-back installation. Metricon does not guarantee the ability to install units over doors or windows as around 450mm of space is required to complete an install.

HEATING & COOLING

REVERSE CYCLE HEATING/COOLING SYSTEMS

A ducted reverse cycle system uses one unit for both heating & cooling to your home. They are all electric systems that can be a great way of providing area or room zoning to your home.

Metricon uses Braemar, ActronAir or Fujitsu for reverse cycle ducted systems.

Braemar

Braemar ducted reverse cycle is the ideal solution for the whole of home heating and cooling. Consisting of an indoor and outdoor unit, the indoor unit is placed within the roof space and is connected to a series of vents within the house via ductwork. Warm or cool air is circulated to all rooms via this system and can be set up to operate in different zones, saving money on energy costs.

ActronAir

An ActronAir AIRES allows a fixed speed heating and cooling option, perfect for whole home comfort with the option of zoning 2-3 rooms, and one or two controllers.

The Advance system is designed to provide lifestyle flexibility while delivering high efficiency heating & air conditioning comfort. Available with touch screen control with wi-fi phone connectivity, different temperatures in different zones, ability to operate down to 1-2 zones saving energy, home automation, and is currently the unit of choice for many new home builds.

Fujitsu

Fujitsu General reverse cycle ducted air conditioning systems provide greater flexibility for whole home comfort and temperature control all year round. Using a single system that is concealed in the ceiling, it's quiet, easy to operate, and is an energy efficient solution to heat or cool multiple rooms, or the entire home.

Features like optional zone control allow users to easily manage the air flow to different areas of the home to maximise comfort and minimise energy wastage. For example, the air conditioning can be on in the living areas during the day, and in the bedrooms during the night. This flexibility makes the system efficient and effective.

For those seeking a smart home solution, the Fujitsu General anywAiR® technology ducted controller provides Wi-Fi control for Fujitsu ducted air conditioning systems via a wall mounted touch pad. Using the anywAiR® app control of the system can be managed anytime, anywhere with selected smartphone and tablet devices.

AIRSMART INDOOR ENVIRONMENT SYSTEM

At AirSmart® we believe in air that improves lives. That's why we've developed the world's finest Indoor Environment System that redefines air purification and climate comfort. An AirSmart® Indoor Environment System reaches beyond heating and cooling to actively deliver air so pure that every breath enriches your body, making your space healthier to inhabit.

The key benefits of an AirSmart® Indoor Environment System are:

Aesthetics

Feel more and see less. AirSmart ducting and air grilles are 75% smaller than traditional systems resulting in a superior architectural finish. You'll see small round air grilles or thin linear air grilles instead of bulky alternatives.

This is important for builds that have limited space within the building profile. An AirSmart system can be 25% the size of a traditional system, making it the perfect fit for flat roof homes. Plus, you won't lose out on wardrobes and other storage areas that a traditional system would take up.

Efficiency

At AirSmart we have taken an outcome focused approach to our system, resulting in an uncompromised efficiency result. Thermal zoning along with AirSmart's high quality materials optimise the efficiency of the overall system. AirSmart's small diameter SmartFlow ducting is up to 300% more efficient than traditional ducting. No energy is wasted while maintaining the exact comfort conditions the system is designed to achieve.

Comfort

The best way to describe AirSmart is ambient. You get comfort without drafts, noise, or fluctuations in temperature within a room, plus avoiding the hot head/cold feet feeling that traditional systems produce. This is increasingly important for a home with higher than average ceilings.

To meet the comfort needs and thermodynamics of your house, the AirSmart IES is divided into multiple thermostat controlled zones. This allows you to control each room separately if desired or, you can split the home into zones determined by use and/or orientation i.e. west-facing bedrooms would have a different heat load to east-facing bedrooms.

Health

A big advantage of AirSmart is our exclusive whole-home bio-defence Air Purification System. AirSmart has an advanced airpurification module that removes particles such as bush fire smoke, pollens, pet dander, viruses, colds, bacteria, mould and chemicals (like off-gassing from paints, adhesives, glues etc). Air Purification reduces absenteeism from work or school, improves health and increases energy. The AirSmart system can be set to have Air Purification running 24/7, the airflow rate is reduced to an unnoticeable amount, so purification happens in the background autonomously.

HEATING

HYDRONIC HEATING

What is hydronic heating?

Hydronic heating systems use water to move heat from a source e.g. gas boiler, heat pumps etc. through piping to each room. It can be installed in concrete slabs, hydronic radiator and hydronic towel rails. In Slab heating is best used with tiled floors.

Comfort

Hydronic heating distributes even heat with balanced air moisture and avoids uncomfortable hot spots, warm draughts, or smells. Hydronic systems also enable you to personalize your heating requirements and they operate silently allowing you to enjoy the comfort of your home.

Health

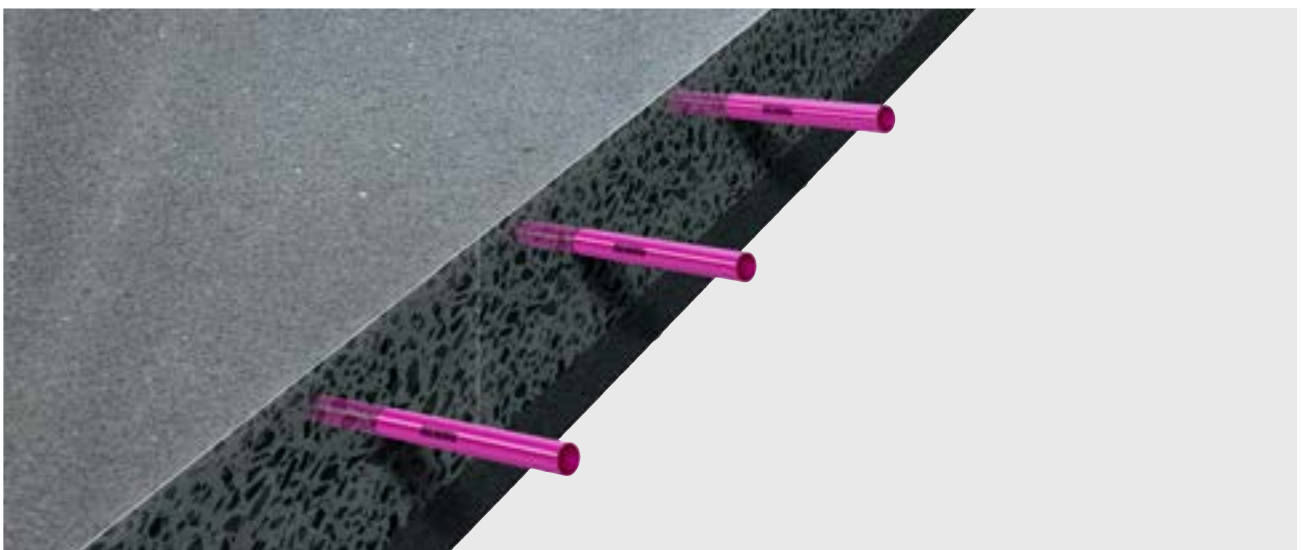

Hydronic heating is also referred to as radiant heating, although radiant heating can use either electricity or hydronic systems. Radiant heating is based on the principle of radiant energy which transfers heat from a source to an object, just like heat from the sun. By mimicking nature, hydronic heating produces improved air quality and healthier homes, reduces allergens and dust providing for a healthier home.

How does it work?

Water is heated in a boiler and then distributed quickly around the house through piping in the walls. It then travels into panel radiators which are installed in each room and then transferred out into the air spreading evenly around the room. Or in the case of floor heating the water is distributed around coils of piping under a concrete slab which then heats the whole surface area.

Efficiency

There is a number of reasons why hydronic heating is the most efficient system to operate. Firstly, water is a better conductor of heat than air, so heat is transferred with great ease around spaces. Secondly hydronic heating evenly distributes heat, unlike other forms of heating where there is always one part of the room that is warmer than the rest. Modern hydronic heating systems also enables you to control the temperature of each area with a thermostat so they can be adjusted according to which rooms are occupied and individual needs. For example bedrooms can be maintained at lower heating to communal living areas. This minimises heat loss and energy consumption which means lower environmental impact and power bills.

PLEASE SPEAK WITH YOUR ELECTRICAL CONSULTANT FOR MORE INFORMATION ON THE UNIT BEST SUITED TO YOUR HOME NEEDS.

The colours and products shown in this document are a visual representation to be used as a guide only. Subject to change without notice. Please speak to your Interior Design Consultant for more details.

WHAT OPTIONS ARE AVAILABLE?

Hydronic heating systems can have a combination of panel radiators and in-slab heating.

A combined system enables you to customise a hydronic heating solution for individual areas of your home.

A hydronic radiator system is the ultimate in home comfort and heating efficiency. The system is installed using a series of pipework that delivers hot water to radiator panels in desired locations through the home.

Hydronic radiator panels provide a silent, ambient temperature and can be individually controlled at each unit.

Hydronic slab heating is an unobtrusive, luxurious and efficient form of hydronic heating. In-slab hydronic heating systems is installed using polythene 'floor circuits' embedded in the concrete slab. The system is heated with 50°C water from the hydronic boiler and can be zoned to suit individual requirements.

HEATING

FIREPLACES

Jetmaster offers a range of balanced flue gas fires from Heat & Glo, along with VisionLine electric fireplaces. A fireplace from Jetmaster will add immediate value to any home, and our versatile range of products pair perfectly with a variety of interiors, so you can always find the right fireplace to suit your space.

We provide inbuilt, single and double sided, and freestanding units, with a wide variety of installation options as well as industry-leading warranty coverage and product protection. With a range of installation options, Jetmaster fires are ideal for both single and multi-storey builds.

There's no limit to the design possibilities with a Jetmaster fire. For a more classic styling, you can choose from a range of mantels, hearths, stone margins, and cast iron fascias, to replicate the look of a traditional fireplace.

Heat & Glo fireplaces utilise balanced flue technology which draws fresh air for combustion from outside and expels the minimal combustion by-products externally. With fully sealed fireboxes, they are safe and ideal for those with allergies or asthma. Balanced flue gas fires give you the best of both worlds - immediate ignition, efficient warmth, stunning flames, and a multi-function remote control, whilst not trading off on heat output or appearance.

Stunning designs and smart technology combine effortlessly with the VisionLine range of electric fireplaces. Perfectly suited for all electric homes, or simply those wanting a decorative feature that can be used all year round. Personalize the look and create picture perfect ambience with energy efficient LED flame technology, vibrant colour choices and flame intensity control. VisionLine electric fireplaces feature an easy to use remote and touch panel controls, so you can enjoy dancing flames instantly.

HEATING

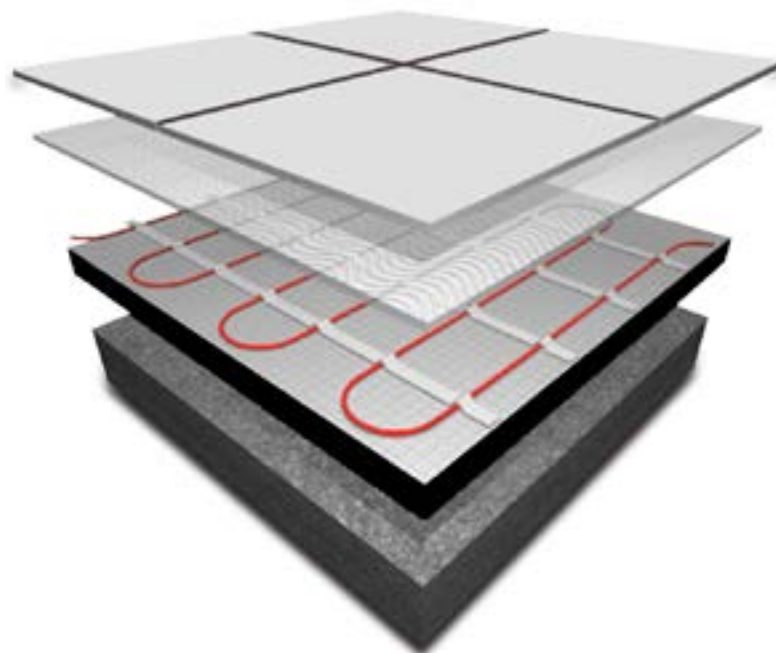

UNDER TILE HEATING

Under floor heating may well be the very ultimate in home heating – the most comfortable and efficient on-demand heating system available for your home.

It's fast to heat up and is surprisingly economical to install and run. Under Tile Heating is installed immediately under the tile on top of the subfloor. It offers a very quick heat up time. Your floor will typically be warm in 30 to 60 minutes.

You can heat a room, a living area or the whole of your home and it's all under your control at the touch of a button.

Under Tile Heating provides beautiful, cosy, even heat for all parts of the home and is especially suitable for wet areas. It's warmth is automatically controlled by a sophisticated, easy to use thermostat which ensures the heat is on when and where you want it.

OUTDOOR HEATER

Amphis Soleado

The Soleado is the perfect accessory to complete your outdoor entertaining area, providing safe and efficient warmth for you and your guests. The Soleado 2400W Far Infrared (FIR) Radiant Heater, with or without bluetooth speakers, can be controlled remotely. A cosy outdoor setting is only the push of a button away. Features include an adjustable timer, a range of heat settings and heating technology that has proven health benefits.

SOLAR

SOLAR PHOTOVOLTAIC (PV) SYSTEM

How much power will I get and what are the savings?

The output of a solar PV system depends on a range of factors such as its size and orientation.

A typical house consumes around 15 kilowatt hours per day, and over a year a 1.5 to 3 kilowatt system might generate around 35% to 70% of this requirement. The amount generated by the system varies throughout the year as the length of daylight changes.

What are the benefits of solar PV systems?

Installing a solar PV system will allow you to generate renewable energy and reduce your electricity bills. Some of the electricity you generate is used in your home to power electrical appliances and some is exported back to the electricity grid.

INVERTER

- ☐ STANDARD
- ☐ HYBRID

POWER

- ☐ SINGLE PHASE
- ☐ THREE PHASE

STORAGE

- ☐ ADD BATTERY

HOT WATER SYSTEM

As standard your new home comes with an electric heat pump.

Energy efficient electric heat pumps are a great way for households to make substantial reductions in your energy consumption and cost of living.

When should I add an additional hot water system?

- My home is long, and the hot water system is located at one end of the home.
- I have ensuites off all the bedrooms, and want to ensure I have sufficient hot water.
- I want my kitchen and laundry to have hotter water than is permitted to my bath and showers.
- I have a twin head shower, and want each head to run from an independent source of water.
- I don't want to waste water waiting for the water to get hot from the hot water system on the other side of the home.

NOISE REDUCTION

HEBEL POWERFLOOR

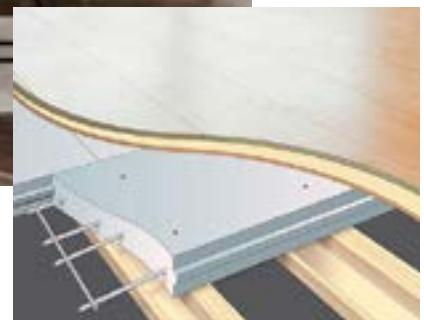

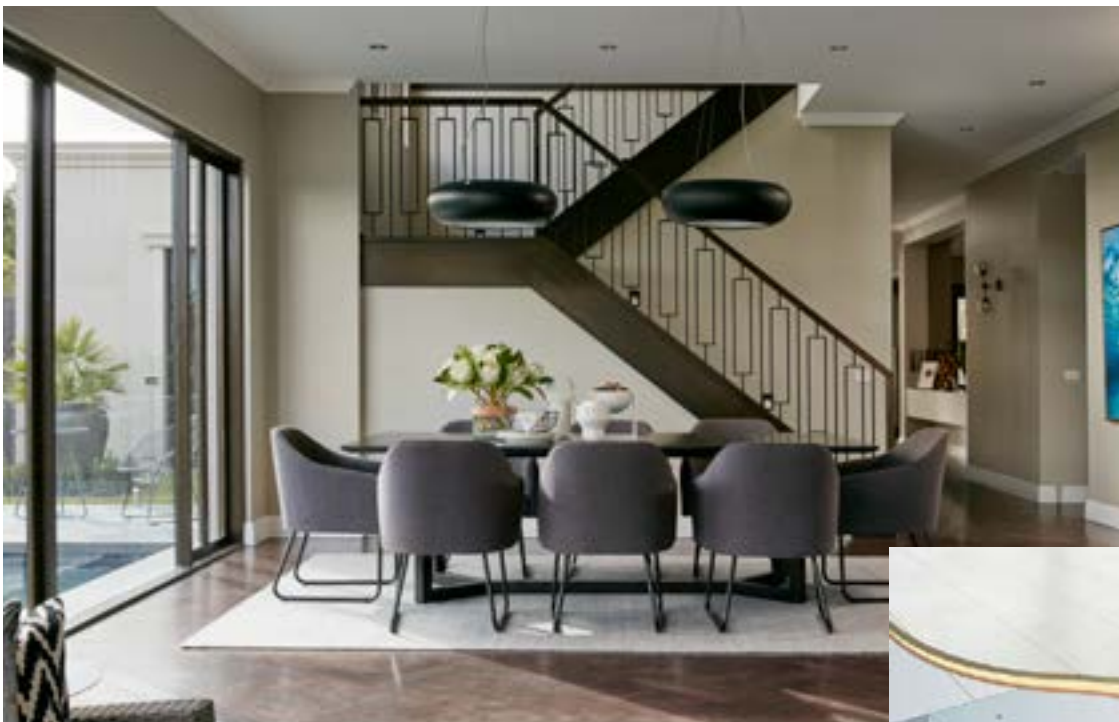

Creating a comfortable and peaceful home for you and your family

PowerFloor is a sound investment for a peaceful home. The acoustic performance and thermal insulation properties of this flooring system means it helps to keep your home warmer in winter and cooler in summer – as well as minimising noise transference and footfall noise between floors. This is especially important given the trend away from carpet to hard flooring such as timber and tiles.

Better still, because PowerFloor is a solid flooring system there is none of the squeak or bounce and flex associated with particleboard flooring, or the expensive price tag that

comes from traditional concrete floors, making it a great choice for first floors and suspended ground floors, decks and balconies.

The PowerFloor system consists of 75mm AAC (Autoclaved Aerated Concrete) panels, reinforced with anti-corrosion protected steel mesh which fit snugly together to form a strong, solid and smooth floor. This provides an excellent base for the floor covering of your choice.

The unique benefits of constructing your floor with PowerFloor

Solid floor without the price tag

An excellent flooring solution that provides the feel of a solid concrete floor for a lot less cost.

Noise reduction

Offers excellent acoustic performance, minimising noise transference between floors making a quieter and more peaceful home.

No squeak or bounce

Panels fit snugly together to form a smooth, strong floor, eliminating the 'squeak and bounce' factor often associated with particleboard flooring.

Helps reduce energy costs

Thermal performance - a home built with Hebel stays cool in summer and warm in winter so requires less of a reliance on heating and cooling helping to reduce energy costs.

Solid and strong

Hebel's PowerFloor system is robust, strong and solid, containing corrosion protected steel reinforcement for maximum strength and durability.

Eco-friendly

Environmentally friendly product, making it the smart choice.

Fire resistant

Meets or exceeds the requirements for all six Bushfire Attack Level (BAL) providing a safe and secure home.

Proven

CSR Hebel is the only manufacturer of AAC in Australia. With over 25 years of experience in developing, testing and producing AAC you can be assured you're getting high quality products and systems and unmatched technical expertise with Hebel.
